Bill,

Liz is going to be out most of the rest of this week. Let's just remove the placeholders for the sampling map and publish.

Thanks!

Done. Since the OSC site is not a site document, I linked to it under Cleanup Progress and again under Links.

<https://wcms.epa.gov/node/86725/revisions/190353/view>

Do we expect the sampling locations map relatively soon, or should we remove the two placeholders for that and publish?

Hi, Bill.

I think the site looks great. Just a little final polish –

- In addition to the PolRep for the Red and Bonita, could you add a link to the OSC Web site. It has additional information about the removal action - http://www.epaosc.org/site/site_profile.aspx?site_id=8417
- Could you replace the definition for benthic invertebrates under Results of Recent Investigations with the following (small organisms that live in or on the bottom sediments of rivers and streams)
- I think it would be great to mention that the CIP has been prepared for the R&B under Community Involvement. Let's add – "A Community Involvement Plan was prepared for the Red and Bonita Removal Action in January 2015.

Thanks for all your help with this!
